

## About our Index

Pages in the following index include Book 1 page 28 – 501 & Book 2 page 503 – 958. Most of the materials in pages preceding 28 deal with Salt Licks and Public Areas which are included elsewhere in this publication.

Spelling shown is exactly as the records indicate – no corrections have been made.

We normally combine the listing for names such as: Sam'l - Samuel, Wm - William, Ja's - James and Jn'o - John.

Martin Armstrong or Daniel Smith usually signed every survey. When either of these two officials signed a survey, in this capacity, the name has not been treated as an indexable event.

We have included several "Marked" categories. These include branches, springs, improvements and trees. Trees marked will be in the single category regardless of the individually named tree variety.

In index categories where Road and Trace are used those designators are listed first. An example might be Gibson's Trace and would be shown as Trace Gibsons.

We use the abbreviations SSCR & NSCR to represent commonly used "South Side of Cumberland River" and "North Side of Cumberland River". Likewise RR is seen as Red River and BB is designated as Big Barren.

Many of the records were extremely difficult to read because of the film quality as well as transcription problems. We have attempted to group the various spellings of the same surname where possible but many times this was difficult if not impossible. Some of the surveyors were very creative in spelling the names so a word to the wise might apply here – check every possible derivation of the names you are attempting to look up.

This index was extracted manually and inserted into a Microsoft Excel worksheet containing 12,136 lines of indexable items. We used the sort feature then constructed the index in a single column of data. The final step was to import to Microsoft Word and increase to two columns. Thanks to Shirley Wilson for this concept.
